Módulo 3. Actividad 3.1

Mi prompt en la práctica

Seguimiento semanal del mercado de remates judiciales para Subaxa

Carlos Luis Rojas Aragonés

Chief Technology Officer Program

10 de noviembre de 2026

1. El prompt y su iteración

> *Describa: (a) la tarea elegida, (b) el prompt final, (c) los cambios realizados entre la primera y la segunda versión y (d) qué ha permitido conseguir el resultado mejorado que no permitía el primero.*

Cada semana reviso si pasó algo en el mercado de remates judiciales que afecte a Subaxa: cambios en las fuentes de datos, en los remates o en la competencia. Ejecuté las dos versiones en Claude Code.

Primera versión.

> *Research consequential developments from the past week in the judicial-auction market that could affect Subaxa. Prioritize Costa Rica, then Latin America and international developments with clear transferable relevance. Focus especially on changes to auction data sources and access, collection or scraping methods, auction platform practices, and business models. For each development, explain what changed, why it matters to Subaxa, and any concrete implication or follow-up worth considering. Use reliable, current sources and include links. Distinguish confirmed facts from analysis, avoid routine or speculative news, and say briefly if there were no consequential developments.*

Versión final.

> *You are a market-intelligence analyst reporting to the CTO of Subaxa.*
>
> *Context: Subaxa is a Costa Rican PropTech company. Its platform helps investors buy real estate at judicial auctions in Costa Rica: an interactive map of opportunities, AI-based analysis, and a legal and investment team that supports the investor through the auction. The platform depends on auction edicts published in the Boletín Judicial (run by the Poder Judicial) and on property data from the Registro Nacional, which we collect automatically. I read this brief every Monday to decide whether we need to change our data collection, our product or our priorities.*
>
> *Task: Research developments from November 3 to November 10, 2026 in the judicial-auction market that could affect Subaxa. Cover Costa Rica first, then Latin America and other countries only when the lesson clearly transfers to Costa Rica.*
>
> *A development is consequential only if it changes at least one of these: (1) what auction data is published, where, or how it can be accessed (login, format, fees, terms of use, rate limits); (2) how judicial auctions are run (electronic auctions, procedural rules, bills in the Asamblea Legislativa such as 19.722 and 25.745); (3) what competing auction-listing platforms in Costa Rica offer (launches, pricing, features).*
>
> *Verification: Do not rely on search-result summaries. Open the primary sources yourself: the Boletín Judicial site, the Registro Nacional, the Poder Judicial news site, the Asamblea Legislativa record of those two bills, and the competitors' sites. Open every article you cite and confirm its date and what it says. If you could not open a source, say so.*
>
> *Format: Answer in English, in at most 300 words, not counting links. First line: the verdict in one sentence (whether there were consequential developments this week). Then at most three developments, most important first, each with three labeled lines: «What changed» (confirmed fact, with link), «Why it matters» (your analysis), «Follow-up» (one concrete action). «Watch list»: at most two items from outside the week, one line each. «Unverified»: anything you could not confirm. «Sources checked»: one line per primary source, saying whether you opened it and whether you saw any change.*
>
> *Constraints: Keep confirmed facts separate from your analysis. Leave out routine or speculative news and anything outside the dates that does not fit in «Watch list». Do not pad: if nothing qualifies, say so and stop after the fixed sections.*

A la primera versión le faltaban el rol, el contexto y el formato. Su resultado salió de resúmenes del buscador y se llenó de noticias viejas. En la segunda definí qué es relevante, pedí abrir las fuentes y fijé el formato. El nuevo resultado dice cuáles fuentes revisó y cuáles no pudo leer, y encontró dos cosas que el primero no vio: una circular que fija el formato de los edictos y los precios de un competidor.

Tabla 1: Los cinco componentes en cada versión del prompt.

Componente	Primera versión	Versión final
Rol	No estaba.	Analista de mercado que le reporta al CTO.
Tarea	Novedades de «la última semana».	Igual, con fechas exactas.
Contexto	Solo el nombre de Subaxa.	Qué hace Subaxa, de qué fuentes depende y para qué uso el informe.
Formato	Qué explicar de cada novedad.	Máximo 300 palabras, veredicto primero y secciones fijas.
Restricciones	Separar hechos de análisis y evitar lo rutinario.	Además, qué cuenta como relevante, abrir las fuentes y no rellenar.

Resultado de la primera versión

Short answer: I found no consequential development in the past week (Nov 3–10, 2026) that changes auction data sources, access, scraping methods, platform practices or business models, in Costa Rica or elsewhere. One Costa Rican item is worth watching, and a few items outside the window are noted as background.

This is based on web searches and their result summaries; I did not open the articles or inspect the Boletín Judicial or Registro Nacional sites directly. A quiet technical change there (markup, login, rate limits) would not show up in news; your ETL logs are the better detector.

Worth watching: Poder Judicial 2027 budget (Costa Rica)

- **What changed (reported):** On Nov 10, President Laura Fernández agreed to review the restrictions on roughly ₡30,000 million of the judiciary's 2027 budget after meeting the Supreme Court president, and a technical working group will be set up (Infobae, Trivisión). Separately, the 2027 national budget is reported paused by two precautionary measures and cannot be voted before Nov 29 (Trivisión).
- **Earlier warnings:** The judiciary had said the cuts could close offices and stall digital projects (La Nación, El Observador). Outlets report different cut figures.
- **Why it matters (my analysis):** The Poder Judicial has published the Boletín Judicial itself since 2023 and runs the collection courts, so a squeeze could slow edict publication or auction scheduling. Nothing I found mentions the Boletín or the juzgados de cobro specifically.
- **Follow-up:** Recheck after Nov 29. A cheap early signal would be tracking edicts per day and the lag between edict and auction date in your own data.

Background, outside the one-week window

- **Delinquency is rising (demand-side):** Sugef data cited by CRHoy show 90-day arrears going from 2.02 % (Jul 2025) to 2.32 % (Aug 2026). La Nación reported in October sharp increases at BCR and Banco Popular, still under the 3 % threshold (CRHoy, La Nación). My read is that this points to more auction volume in 2027, with a lag.
- **Bill 25.745 (electronic cédulas hipotecarias):** An August 2026 bill covering issuance and judicial execution of electronic mortgage bonds (text). I found no movement this week and could not confirm its status.
- **Online judicial auctions (bill 19.722):** No sign of revival; the only material is the old Corte Plena report (Poder Judicial).
- **Registro Civil access gating (unverified):** A third-party guide says the TSE has required a user account, with logged queries, for online person searches since Oct 9, 2026 (crtramites.com). It only matters if you query that source, but it would be a precedent for gating public registries.
- **Competitors:** TicoRemates, RemateJusto, rematejudicialcr, Remate360 and RJC are all active, with no launch or pricing announcement found this week (TicoRemates, RemateJusto, rematejudicialcr, Remate360, RJC).

Latin America and international

Nothing new this week.

- **Argentina:** The Supreme Court's electronic auction system (mandatory since Oct 2025) had 1,078 registered bidders and 301 auctions as of a June 2026 balance (Justicia.ar). Mendoza launched its own in May 2026 (Poder Judicial Mendoza).
- **Peru:** Law 32297 makes electronic judicial auctions the default; the start date I saw (July 24, 2026) comes from a secondary source (juris.pe).
- **Scraping law (US):** No new ruling on court or auction data. An October commentary covers a federal ruling that

terms of use alone did not make a scraper of public data liable (NatLawReview). It is not directly transferable to Costa Rica.

The transferable pattern is that when courts move auctions online they add a central bidder registry and an official portal, which changes the data source and narrows the value of pure edict aggregation. That is not imminent in Costa Rica on the evidence found.

Resultado de la versión final

Verdict: I found no consequential development for Subaxa between November 3 and 10, 2026, but three primary sources could not be fully opened, so this is not a clean all-clear.

Developments: None qualify.

Watch list

- Boletín Judicial Circular 77-2026 (July 3, 2026) requires courts to submit edicts as digital, non-scanned PDFs in a fixed format (Arial 12, no bold), which should make edict text more uniform to parse: https://boletinjudicial.poder-judicial.go.cr/images/Documentos/Circular_77-2026_Requisitos_publicaciones_Boletin_Judicial.pdf
- RemateJudicialCR sells AI edict analysis, cadastral map and alerts at $29.90 to $189.90 per year, against Subaxa's $27 to $77 per month; its launch date is unknown: https://rematejudicialcr.com/planes

Unverified

- Whether this week's Boletín Judicial editions changed in format or access: the editions sit in the Nexus PJ app, which my tools could not render.
- Any movement on bill 19.722 ("Ley de remate judicial en línea"): I found no current record of it.
- Any movement on bill 25.745 in the Asamblea's own system: I only saw Delfino's copy.
- The Registro Nacional login page says self-registration is disabled "durante el plan piloto"; the notice is undated, so I cannot say whether it is new.
- Competitor "no change" means no announcement visible today; I had no earlier snapshot to compare.

Sources checked

- Boletín Judicial portal (https://boletinjudicial.poder-judicial.go.cr/): opened; no new notice, and the newest circular is from July 2026.
- Nexus PJ, edition of the day (https://nexuspj.poder-judicial.go.cr/document/avi-1-0155-15880): not readable.
- Poder Judicial news (https://pj.poder-judicial.go.cr/): opened the home page only; the November 9 and 10 items do not concern auctions.
- Registro Nacional, rnpdigital.com (https://www.rnpdigital.com/shopping/login.jspx): opened; no dated notice.
- Registro Nacional, registronacional.go.cr: not opened (certificate error).
- Asamblea Legislativa SIL: not opened (certificate error).
- Bill 25.745 on Delfino (https://delfino.cr/asamblea/proyecto/25745): opened; it covers digitalising cédulas hipotecarias, is in Asuntos Jurídicos, and its last event was August 26, 2026.
- Bill 19.722 on Delfino: not found (404).
- RemateJusto (https://rematejusto.com/): opened; no pricing or launch notice.
- Remates RJC (https://rematesrjc.com/): opened; free search, no announcement.
- Pre-remates (https://pre-remates.com/): opened; no announcement.
- RemateJudicialCR (https://rematejudicialcr.com/): opened; see Watch list.

2. Mi biblioteca de prompts

> *Cree al menos tres entradas completas que abarquen un mínimo de dos funciones profesionales o tipos de tareas distintos.*

1. Informe semanal de novedades del mercado

Cuándo usarlo. Cada lunes, para decidir si una novedad del mercado obliga a cambiar la recolección de datos, el producto o las prioridades. Necesita una herramienta que pueda buscar en la web y abrir páginas.

Plantilla.

> *You are a market-intelligence analyst reporting to the [PUESTO] of [EMPRESA].*
>
> *Context: [QUÉ HACE LA EMPRESA Y DE QUÉ FUENTES DE DATOS DEPENDE]. I read this brief every [DÍA] to decide [DECISIÓN QUE APOYA EL INFORME].*
>
> *Task: Research developments from [FECHA INICIAL] to [FECHA FINAL] in [MERCADO] that could affect [EMPRESA]. Cover [PAÍS PRINCIPAL] first, then [OTRAS REGIONES] only when the lesson clearly transfers.*
>
> *A development is consequential only if it changes at least one of these: [CRITERIOS DE RELEVANCIA, NUMERADOS].*
>
> *Verification: Do not rely on search-result summaries. Open the primary sources yourself: [FUENTES PRIMARIAS]. Open every article you cite and confirm its date and what it says. If you could not open a source, say so.*
>
> *Format: Answer in [IDIOMA], in at most [N] words. First line: the verdict in one sentence. Then at most [N] developments, each with three labeled lines: what changed (confirmed fact, with link), why it matters (your analysis) and one follow-up action. Then «Watch list» (at most [N] items outside the dates), «Unverified» and «Sources checked» (one line per primary source).*
>
> *Constraints: Keep confirmed facts separate from your analysis. Leave out routine or speculative news. Do not pad: if nothing qualifies, say so and stop after the fixed sections.*

Cómo se ve un buen resultado. Empieza con el veredicto. Cada hecho trae un enlace que se abrió, no un resumen del buscador. Dice qué fuentes revisó y qué no pudo confirmar. Si no pasó nada, lo dice en pocas líneas y no rellena.

Técnicas. *Role prompting* (analista de mercado) y *zero-shot*: no lleva ejemplos, así que el formato de salida fijo y la definición explícita de qué es relevante hacen el trabajo que haría un ejemplo. Usa los cinco componentes: rol, tarea, contexto, formato y restricciones.

2. Borrador de artículo para el blog

Cuándo usarlo. Cuando quiero explicar un tema técnico a partir de algo que estamos haciendo en la empresa, sin revelar información comercial.

Plantilla.

You are a technical writer helping the [PUESTO] of [EMPRESA] write for [AUDIENCIA].

Task: Write a blog post about [TEMA]. First explain the concept briefly, then show how it works in practice using this experience: [EXPERIENCIA REAL, A ALTO NIVEL].

Context: [QUÉ HACE LA EMPRESA]. We cannot disclose [LO QUE ES CONFIDENCIAL]; describe our work only at a high level.

Format: [N] words, in [IDIOMA], with [N] figures or charts. Include [FIGURA ESPECÍFICA, SI HACE FALTA].

Example: This is a previous post of mine. Match its tone, length and structure, not its content: [ARTÍCULO ANTERIOR].

Constraints: Give a source with a link for every factual or historical claim. Mark every number that is illustrative. Do not claim that something is new or unique unless a source supports it. End with a list of the claims I should verify before publishing.

Cómo se ve un buen resultado. Se lee de corrido, la audiencia lo entiende y suena como el artículo de ejemplo. Cada dato tiene fuente. Las cifras de ejemplo están marcadas como ilustrativas y cuadran entre el texto y las figuras. No revela nada confidencial.

Técnicas. *Role prompting* (redactor técnico) y *one-shot*: un artículo anterior sirve de ejemplo de tono y estructura. Con varios artículos pasaría a ser *few-shot*. Las restricciones cubren las fuentes y la confidencialidad.

3. Revisión de un texto generado por IA antes de publicarlo

Cuándo usarlo. Antes de publicar o enviar cualquier texto hecho con IA que vaya con mi nombre o que llegue a inversionistas.

Plantilla.

You are a skeptical editor reviewing a text before publication. You did not write it and you have no reason to defend it.

Context: The text below was drafted with an AI tool for [AUDIENCIA]. It will be published at [DÓNDE SE PUBLICA] under the name of [AUTOR]. [EMPRESA] cannot disclose [LO QUE ES CONFIDENCIAL].

Task: Review it step by step with these four questions: (1) Is it accurate? (2) Is it current? (3) Does it fit this context and audience? (4) What still has to be verified before acting on it?

Format: A table with one row per problem: the quoted sentence, which of the four questions it fails, why, and the fix you propose. After the table, one line with your verdict: publish, publish with changes, or do not publish.

Constraints: Quote the text exactly. Do not rewrite the whole text. Do not comment on style unless it changes the meaning. If you cannot check a claim, list it as unverified and do not guess.

Text: [TEXTO A REVISAR]

Cómo se ve un buen resultado. Cita frases exactas del texto, no impresiones generales. Encuentra afirmaciones que suenan bien pero son falsas o no tienen fuente. Separa lo que está mal de lo que solo falta verificar. Termina con un veredicto claro.

Técnicas. *Role prompting* (editor escéptico, para que no defienda el texto) y *chain of thought*: le pido revisar paso a paso con las cuatro preguntas del módulo 2 antes de dar el veredicto. La salida va en una tabla.

3. Reflexión sobre la iteración

Indique cuál de los cuatro criterios de evaluación (corrección, pertinencia, formato y tono, e integridad) ha resultado más difícil de satisfacer. Explique qué revela esta dificultad y cómo cambiará su manera de utilizar las herramientas de IA.

Iterar me mostró que la primera versión dejaba casi todas las decisiones en manos de la IA: qué era una semana, qué era relevante, qué hacer con lo viejo y en qué formato responder. El resultado no era malo, pero era el informe que la IA decidió hacer, no el que yo necesitaba.

La pertinencia y el formato se resolvieron al definir el criterio y fijar la estructura. El criterio más difícil fue la integridad. Lo que más me interesa es saber si cambió algo en las fuentes de datos, y eso casi nunca sale en las noticias. En la segunda versión la IA abrió las fuentes, pero no pudo leer las ediciones del Boletín Judicial ni entrar al sitio de la Asamblea.

Creo que esto no es un problema del prompt, sino un límite de la herramienta: una IA que busca en la web ve lo que se publica, no lo que cambia en silencio. A partir de ahora voy a pedir siempre la lista de fuentes revisadas y de lo no verificado, y los cambios técnicos los voy a vigilar en nuestros propios sistemas, no con un prompt.
